

Name: _____

Octopus Hunter

Long ago, there was an octopus hunter who went out and caught 37 octopi. There were four members in his family. If he wanted to share the octopi fairly, how many octopi would each family member get? Show your work!

How many octopus legs would each family member get? (share the legs of any leftover octopi!!!)

How many octopi would each of the 4 family members get if he had caught 93 octopi?
